Objective

Computer Science student with strong expertise in Full-Stack Web and Mobile application development, Competitive programming, Data structures, and Machine learning. Passionate about building scalable systems and solving real-world problems.

Education

BSc in Computer Science and Engineering Feb 2022 – Sept 2026*
United International University
CGPA: 3.31

Technical Skills

Languages: C, C++, Java, Python, JavaScript, PHP
Frontend: React, React Native, HTML, CSS, Tailwind CSS, Bootstrap
Backend: Node.js, Express.js, PHP
Backend as a Service (BaaS): Firebase, Supabase
Databases: MySQL, PostgreSQL, MongoDB, Redis
ORM & ODM: Prisma, Mongoose
Tools: Git, GitHub, Postman
Concepts: Data Structures & Algorithms, REST APIs, OOP, Machine Learning, Computer Vision

Projects

SatheCholo — Ride-Sharing & Carpooling Platform (In Progress) GitHub
Tech: Node.js, Express.js, PostgreSQL, Redis, WebSocket, Firebase, Google Maps

- Building a bilingual (English & Bangla) ride-sharing platform supporting both intra-city rides and inter-city carpooling.
- Designed a real-time ride-matching and chat system using WebSockets, reducing matching latency.
- Implementing scalable backend architecture with Redis caching and event-driven communication.
- Added safety features including identity verification, SOS emergency support, and AI-based harassment detection.

DirectEdge — Agricultural Supply Chain Management System GitHub
Tech: Python, PHP, JavaScript, MySQL

- Developed a 3-sided platform connecting farmers, distributors, and retailers to streamline supply chain operations.
- Implemented real-time inventory tracking and demand forecasting using machine learning techniques.
- Improved operational efficiency by reducing manual coordination and enabling data-driven decision making.

Cook Corner — Smart Cooking Assistant Platform GitHub
Tech: PHP, MySQL, JavaScript, HTML, CSS, Bootstrap

- Developed a full-stack cooking assistant platform integrating recipe discovery, meal planning, nutrition tracking, and ingredient-based recommendations.
- Designed advanced search and filtering system with dietary preference support (vegan, keto, gluten-free), improving personalization and usability.
- Architected a modular backend with relational database design handling complex many-to-many relationships, and integrated external APIs to enhance content and engagement.

Wanderlust — Full-Stack Property Rental Platform GitHub Live Demo
Tech: Node.js, Express.js, MongoDB, Mongoose, Cloudinary, JavaScript, Bootstrap

- Engineered a full-stack rental platform with secure authentication, role-based authorization, and RESTful APIs for managing listings, reviews, and users.
- Designed scalable data models using MongoDB (Mongoose) with relational referencing for listings, users, and reviews, ensuring data consistency and efficient querying.
- Integrated geolocation and cloud-based media storage (Cloudinary) to support map-based property discovery and optimized image handling for improved user experience.

ExeCode — Online Competitive Programming Platform GitHub
Tech: PHP, MySQL, JavaScript, HTML, CSS, Monaco Editor

- Built a full-stack competitive programming platform with contest system, problem sets, and real-time leaderboard supporting dynamic user rankings.
- Developed an in-browser IDE using Monaco Editor with multi-language support, enabling seamless code writing and execution workflow.
- Designed scalable backend architecture with relational database modeling for users, problems, submissions, and contests, including automated evaluation and ranking logic.

Competitive Programming

- Solved 500+ problems. Codeforces max rating: 950 (Newbie).
- Participated in 50+ contests on **Codeforces**, **LeetCode**, **CodeChef** and **VJudge**.
- Participated in inter-university programming contests including **UIU IUPC**, **UIU Coders Combat 4.0**.

Achievements

- First Runner-Up at the UIU CSE Project Show (Summer 2025) for the project "DirectEdge".
- Academic Scholarship Recipient.

Experience

Personal Projects & Self-Driven Development

- Built and deployed multiple full-stack applications using modern technologies.
- Followed clean code practices, version control, and scalable system design principles.
